**Notes:**

If duplicate patient record(s) are found in a batch, only the first occurrence will be saved. All subsequent duplicates will be skipped and included in the skip counter on the summary. If a duplicate record exists from a previous batch and has no errors, the duplicate will be skipped and included in the skip counter. If a duplicate record exists from a previous batch and has errors, the duplicate will overlay the original record and included in the overlay counter.

Since the patient control number is used as the record key, if it is missing the record will be skipped and not counted.
