

Introduction

This reference manual contains information to assist users in the interpretation of data available from the reports. For additional assistance, please contact the West Virginia Hospital Association staff using the link on HIDI Analytic Advantage®.

Reporting Period

CY Calendar Year, January 1 – December 31
West Virginia hospital discharge data are reported based on Calendar Year

FFY Federal Fiscal Year, October 1 – September 30
Reports based on Federal Fiscal Year are indicated as FFY
Example: FFY2019 includes data from October 1, 2018 – September 30, 2019

Report Data

Hospital Inpatient Reports: Comprehensive information about utilization patterns and market share characteristics. Inpatient reports contain data for all discharges submitted.

Acute Category: Represents discharges for acute care patients selected by "Place of Service = 1, 2, 3, 5, 6, and 7". See page 4 for definitions and caveats.

Non-acute Category: Represents discharges for non-acute patients selected by "Place of Service = 4". See page 4 for definitions and caveats.

Hospital Outpatient Reports: Submission of outpatient data from WV hospitals started with January 1, 2020 visits.

- "Classified" services are revenue codes that have been identified and grouped within categories such as Emergency, Surgical, Observation, and Clinical Services as reported in the standard outpatient reports.
- "Unclassified" visits include those revenue codes that fall outside of the "Classified" definition. "Classified" visits can include "Unclassified" revenue codes, but "Unclassified" visits cannot include "Classified" revenue codes.
- Refer to the "Outpatient Data" section for revenue codes included in the service categories.

Out of State Data: Not yet available. WV residents receiving care from hospitals in other states will be included as data becomes available.

Report Types

Region Reports: Data are compiled based on patient origin – patient residence (county or ZIP code) reported on inpatient discharge records.

Service Area Reports: Data are compiled based on patient destination – where patient received treatment (Including WV Region, see page 48).

Diagnosis Groups: Many of the reports have been grouped based on diagnosis groups - MDC and DRG.

- **Major Diagnostic Category (MDC):** MDC's are formed by dividing all possible principal diagnoses into 25 mutually exclusive diagnosis areas. MDC codes, like DRG codes, are primarily a claims and administrative data element unique to the United States medical care reimbursement system. DRG codes are mapped (or grouped) into MDC codes.

The diagnoses in each MDC correspond to a single organ system or etiology and, in general, are associated with a particular medical specialty. MDC 1 – MDC 23 are grouped according to principal diagnoses. Patients are assigned to MDC 24 (Multiple Significant Trauma) with at least two significant trauma diagnosis codes (either as principal or secondary) from different body site categories. Patients assigned to MDC 25 (HIV Infections) must have a principal diagnosis of an HIV Infection or a principal diagnosis of a significant HIV related condition and a secondary diagnosis of an HIV Infection. MDC Descriptions are in the Reference List beginning on page 10.

- **Diagnosis Related Group (DRG):** DRG code assignments are based upon criteria established for Medicare's hospital reimbursement system. HIDI uses the 3M Core Grouping Software to process discharges. DRG Descriptions are in the Reference List beginning on page 11.

Clinical Classification Software: Clinical Classifications Software (CCS) provides a method to classify diagnoses and procedures into a limited number of categories by aggregating individual ICD codes into broad diagnosis and procedure groups to facilitate statistical analysis and reporting¹. In February of 2020, HCUP released an updated version of the CCS software and includes a method to identify the primary classification system for each diagnoses code, which is being used in the HIDI reporting tool to replace the previous CCS Dx classifications. CCS PX classifications are not affected at this time. For additional information, please refer to the CCSR User Guide, available on the HCUP web site via the above link. A listing of CCSR Body Systems and CCS PX Level 1 and 2 are included in this manual.

For outpatient data, CCS Services and Procedures provides a method for classifying Current Procedural Terminology (CPT®) codes and Healthcare Common Procedure Coding System (HCPCS) codes into clinically meaningful procedure categories. NOTE: Categories are applied to principal CPT/HCPCS codes. A listing of CCS Services and Procedures are included in this manual.

Age Definition: Age may be reported for all ages, displayed as age ranges, or by age categories based on reported data. Any age reported as less than 0 or greater than 124 will be displayed as "Invalid Age Reported." 2016 and 2017 data include Age Groups only.

- All Ages provide aggregated data within age ranges of
 - 0-17; 18-44; 45-64; 65-74; and 75+

Newborn Indicator: Available as a filter selection in some of the Analytic Advantage® PLUS reports.

- Newborn
 - Any record with a principal diagnosis code beginning with Z38
- Non-Newborn
 - Any record with a principal diagnosis code that does not begin with Z38
- Value Not Assigned
 - Diagnosis code not assigned

Swing-Bed: Available as a filter selection in some of the Analytic Advantage® PLUS reports. As defined in the regulations, a swing-bed hospital is a hospital or critical access hospital (CAH) participating in Medicare that has CMS approval to provide post-hospital SNF care and meets certain requirements. Swing-bed counts are identified by bill type 18x, as reported by hospitals submitting data.

Clinical Classifications Software (CCS)

[Clinical Classifications Software Refined \(CCSR\)](#)

Starting in October 1, 2015, diagnoses for hospital inpatient stays and outpatient encounters in the United States are reported using the ICD-10-CM coding system. ICD-10-CM consists of more than 70,000 diagnosis codes. Although it is possible to present descriptive statistics for individual ICD-10-CM diagnosis codes, it is often more useful to aggregate codes into clinically meaningful categories. The CCSR for ICD-10-CM diagnoses provides one method for aggregating codes¹. The CCSR balances the retention of the clinical concepts included in the CCS categories under ICD-9-CM and capitalizes on the specificity of ICD-10-CM diagnoses by creating new clinical categories. In addition, the CCSR allows ICD-10-CM diagnosis codes to be cross classified into more than one category because individual codes can be used to document multiple conditions or a condition and a common symptom/manifestation. The cross-classification of a diagnosis to more than one CCSR category is beneficial for risk adjustment and the identification of comorbidities. However, for some applications, such as ranking hospitalizations by the principal diagnosis, a mutually exclusive categorization scheme is needed. To facilitate this type of analysis, the CCSR tool (starting with v2020.2) includes the assignment of a default CCSR for the principal diagnosis¹. Following is a listing of CCSR Body Systems.

CCSR Body Systems

- Certain conditions originating in the perinatal period
- Certain infectious and parasitic diseases
- Congenital malformations, deformations and chromosomal abnormalities
- Diseases of the blood and blood-forming organs and certain disorders involving the immune mechanism
- Diseases of the circulatory system
- Diseases of the digestive system
- Diseases of the ear and mastoid process
- Diseases of the eye and adnexa
- Diseases of the genitourinary system
- Diseases of the musculoskeletal system and connective tissue
- Diseases of the nervous system
- Diseases of the respiratory system
- Diseases of the skin and subcutaneous tissue
- Endocrine, nutritional and metabolic diseases
- External causes of morbidity
- Factors influencing health status and contact with health services
- Injury, poisoning and certain other consequences of external causes
- Mental, behavioral and neurodevelopmental disorders
- Neoplasms
- Pregnancy, childbirth and the puerperium
- Symptoms, signs and abnormal clinical and laboratory findings, not elsewhere classified

[Clinical Classifications Software \(CCS\) for ICD-10-PCS](#) (beta version) provides a method for classifying ICD-10-PCS procedures into clinically meaningful categories, which can be used for aggregate statistical reporting of a variety of types. (Updated for codes valid through FY 2020.) A fully refined version of the CCS for ICD-10-PCS is expected to be released in 2020¹. Following are Level 1 and Level 2 of the multi-level CCS procedures.

CCS-PX Level 1

- Miscellaneous diagnostic and therapeutic procedures
- Obstetrical procedures
- Operations on the cardiovascular system
- Operations on the digestive system
- Operations on the ear
- Operations on the endocrine system
- Operations on the eye
- Operations on the female genital organs
- Operations on the hemic and lymphatic system
- Operations on the integumentary system
- Operations on the male genital organs
- Operations on the musculoskeletal system
- Operations on the nervous system
- Operations on the nose; mouth; and pharynx
- Operations on the respiratory system
- Operations on the urinary system

CCS-PX Level 2

- Abdominal paracentesis [88.]
- Abortion (termination of pregnancy) [126.]
- Aortic resection; replacement or anastomosis [52.]
- Arthrocentesis [155.]
- Arthroplasty
- Arthroscopy [149.]
- Artificial rupture of membranes to assist delivery [136.]
- Bone marrow biopsy [65.]
- Bone marrow transplant [64.]
- Bunionectomy or repair of toe deformities [143.]
- Cancer chemotherapy [224.]
- Cesarean section [134.]
- Circumcision [115.]
- Colonoscopy and biopsy [76.]
- Colorectal resection [78.]
- Colostomy; temporary and permanent [72.]
- Computerized axial tomography (CT) scan

CCS-PX Level 2

Control of epistaxis [27.]
Corneal transplant [13.]
Coronary artery bypass graft (CABG) [44.]
Cystoscopy and other transurethral procedures
Decompression peripheral nerve [6.]
Dental procedures [29.]
Destruction of lesion of retina and choroid [17.]
